

The ULTIMATE: A PROJECT

fully in keeping with the values of the Arc International group

The **ULTIMATE** Pint glass is the result of an ongoing initiative started by the **UK Government** in 2009. This initiative handed the manufacturing community the challenge to design a product that would help to make drinking venues a safer environment through the reduction of violent injuries caused by glass.

Arc International's commitment

Arc International was the only glass manufacturer that was involved in the British Government project right from the beginning.

www.the-ultimate-pint.com

Since its creation Arc International has always incorporated a sustainable development policy and strategy that brings together economic performance, social equity and respect for the environment. The **ULTIMATE** tumbler project is an extension of this strategy and details our commitment to both global and local issues.

THE TECHNOLOGY : Profile Plus

The Ultimate Pint: safer and stronger

Summary of the materials and profile for a glass offering optimal **safety**.

The Ultimate tumbler is FULLY TEMPERED, as with certain other Arcoroc products, and is designed to offer dramatically increased **resistance against mechanical and thermal shock**.

The Ultimate employs the dynamic **PROFILE PLUS** process to produce a glass with outstanding characteristics. **PROFILE PLUS** is an innovation combining **DESIGN and TECHNOLOGY** to reinforce the body of the glass, making it **EVEN STRONGER**. This innovation is the fruit of more than 50 years of acquired know-how and experience in the glass industry.

www.the-ultimate-pint.com

The technology used makes it possible to obtain a **glass body more resistant**, thereby making the Ultimate glass stronger and **safer to use in public places**. When an impact, or series of impacts, results in the outer shell being broken, the glass breaks into **small pieces which are blunt to the touch**.

This has two consequences:

- Employers benefit from a marked reduction in occupational accidents resulting from cuts.
- Customers benefit from the fact that the broken glass cannot be used as a weapon.

Precautions: Arcoroc recommends that you avoid bunching or stacking the glassware as any mechanical shock can impact upon the tempered property of the glass.

Ultimate glass is **ergonomics** :

A gentle curve to the body creates a subtle shoulder for the hand to rest against.

Head booster :

A new performance Nucleation that offers the perfect balance between a healthy looking beverage and wastage caused by over serving. The base of the glass is laser etched with a unique design which creates a constant stream of bubbles in the beverage, thus promoting a constant head.

Glass: a **recyclable** material

Glass is collected and reintroduced upstream in the production cycle. The recycling of glass reduces the volume of waste and helps protect our natural resources as the recycled material replaces new raw materials in the glass production chain.
